

Soh Khim Ong, PhD is an assistant professor of mechanical engineering at the University of Singapore. Ong's research interests have focused on intelligent and distributed manufacturing systems, computer-aided setup planning, life cycle engineering (LCE), environmental impact assessment, and virtual and augmented reality applications in manufacturing. Her most recent work with LCE research has generated potential applications in integrating environmental factors into the product life cycle, achieving eco-efficiency of products and processes. This research has generated significant impacts on the development of green products and processes for several Singapore industries. Ong has published two books and more than 78 internationally referred journals and conference papers. Ong also serves as an assistant editor for a book series on Manufacturing Systems and Technology published by World Scientific.
